Texas Schools Project (TSP)
Research Agenda to Inform Pandemic Recovery Efforts of Texas Community Colleges

Overview and Opportunities to Participate
Welcome and thank you for joining today!!!
TSP Research Opportunities

Goals Today

* Introduce TSP and the research engagement team
* Brief overview of three aligned studies and opportunities for participation
* Timeline and dissemination plan
* Feedback on research agenda
* Questions
Texas Schools Project supports and conducts high-quality academic research to improve academic achievement and teacher effectiveness, increase transitions to and success in postsecondary education, and improve labor market outcomes of students in Texas and the nation.
TSP is a point of pride for UT Dallas and has a long history

Founded by John Kain in 1992
Primary data source for many top academic studies in education research
Houses administrative data from Texas Education Agency, Texas Higher Education Coordinating Board, and Texas Workforce Commission

UT Dallas Education Research Center established in 2006
Formalized the role of TSP as a key point of access to administrative data from Texas for researchers nationally

The future of TSP
Continue to broaden access to Texas administrative data for important research on education policy in Texas
Build a focused program of research that draws on expertise of TSP affiliated faculty and students at UTD

*Questions*
TSP Recognized Need for Research to Inform Pandemic Recovery Efforts of Texas Colleges

We consulted the literature and discussed needs with our network of policymakers and practitioners

We distilled information from these sources to identify priorities and had discussions with multiple funders

We secured funding to support research on three related and aligned topics all focused on key aspects of pandemic recovery

We are excited to work with the Texas Success Center to implement a coordinated dissemination and stakeholder engagement campaign to ensure that the research meets your needs, causes minimal burden, and is effectively communicated
College Enrollment Drops, Even as the Pandemic’s Effects Ebb

A generation of students may be weighing the value of college versus its cost, questioning whether college is still the ticket to the middle class.

Students Cut College During Pandemic; Their Return Is Uncertain

College Students Struggle to Address a Mental Health Crisis

As the Covid-19 pandemic worsened, expectations and resources on campus remained largely the same.

By Teresa Xie

Teens struggle to balance school, family, work amid COVID-19

Educational disruptions forced by the coronavirus pandemic are hurting teenagers who also may need to work and help their families care for young kids.

August 18, 2020, 3:35 PM
Pandemic Recovery Study
Funded by the US Department of Education, Office of Postsecondary Education through a $400,000 Congressional Earmark

Motivation: The pandemic caused massive disruption to postsecondary education that may hamper recent progress towards improving access and success if not adequately addressed.

Unprecedented decrease in enrollment, particularly for freshmen students, first generation students, and students of color.
Swift shift toward online and hybrid modes of instruction.
Increased stress and other challenges as students, as faculty and staff dealt with a myriad of life challenges posed by the pandemic.
Pandemic Recovery Study

Approach: To address these challenges, we are conducting a mixed-methods study that will offer timely information on how colleges can best support students most affected by the pandemic.

The **quantitative** component will use student-level administrative data to describe shifts in student enrollment, course modality and student success in Texas community colleges since the start of the pandemic.

For the **qualitative** component, we will conduct focus groups with college administrators and staff to document how the pandemic has affected Texas community colleges, how colleges have sought to address challenges exacerbated by the pandemic (e.g. child care needs, mental health struggles, underdeveloped online instruction), and their efforts to both scale and sustain these new success initiatives.
Pandemic Recovery Study

Participation:

• **All colleges** will be included in the quantitative component
• **10 colleges** will participate in interviews and focus groups in Spring 2023

Activities:

• Colleges selected for the study will be required to complete a **15-minute online survey** that will gather college-specific information on specific initiatives to support student success during the pandemic.
• Administrators and staff at these colleges will also need to participate in **one or two online focus groups** that will collect information on:
  • how the pandemic has affected their institution (e.g. budget shortfalls; hiring freezes),
  • the measures their institution imposed to support student success, and
  • the challenges they continue to face as they emerge from the pandemic.
Mental Health Study
Funded by a $150,000 grant from the Trellis Foundation
Additional Co-PIs: Heidi Kane (UT-Dallas), Lisa Padilla (RAND)

Motivation: The pandemic intensified an ongoing decline in mental health among college students that could derail efforts to advance equity in higher education and promote economic and social mobility if not properly addressed.

Mental health challenges are particularly acute for low-income and under-represented minority college students (Anderson, 2020), who have also been disproportionately affected by the pandemic.

Students facing mental health challenges often struggle to attend class and have lower grades than their peers (Breslau et al., 2008; Collins and Mowbray, 2005).

Colleges can play a frontline role in supporting student mental health as a means to improve student success, but services vary considerably across colleges.
Mental Health Study

Approach: To address these challenges, we are conducting a qualitative study that will identify promising practices to support student mental health and offer evidence-based enhancements that Texas community colleges use to improve their existing strategies.

With support from TSP researchers, RAND is leading an IES-funded study to identify promising or effective approaches to addressing student mental health being implemented at community colleges nationally.

With support from the RAND team, TSP will examine how a representative sample of Texas community colleges are meeting student demand for mental health support, particularly among low-income students and students of color, and the extent to which they align with promising approaches identified in the RAND study.
Mental Health Study

Participation:

• A representative sample of 10 colleges will be chosen to participate in interviews and focus groups in Spring 2023.

Activities:

• Colleges selected for the study will be required to complete a 15-minute online survey that will gather college-specific information on:
  • programs that support student mental health,
  • efforts to collect student mental health data, and
  • faculty and staff trainings to increase awareness around student mental health issues and identify students in mental distress.
• Administrators and staff at these colleges will also need to participate in an online focus group that will collect information on:
  • how colleges approach addressing student mental health challenges
  • how they integrate efforts to student mental health with efforts to support student success, and
  • the constraints they encounter that prevent them from meeting their students’ mental health needs.
Part-Time Students Study
Funded by a $300,000 grant from the Greater Texas Foundation
Additional Co-PI: Melissa Martinez (Texas State University)

Motivation: Prior to the pandemic, two-thirds of Texas community college students enrolled part-time – a statistic that has likely increased during the pandemic and is higher for low-income and under-represented minority students.

Nationally, a third of students who attend part-time earned a degree within six years, compared with 80 percent of full-time students (Shapiro, et. al., 2017).

Familial responsibilities and child-care needs, limited access to on-campus resources, and failure to gain early credit momentum are some of the reasons researchers cite to explain these differences (Bombardieri, 2017; Jenkins & Bailey, 2017; Le, Pisacreta, Ward, Margolis, & Booth, 2020).

The most prominent policy response is to encourage students to enroll full-time, a solution that may not be possible for all college students.
Part-Time Students Study

Approach: To address these challenges, we are conducting a mixed-methods study to better understand part-time enrollment behavior and factors that promote or hinder success of part-time students.

The **quantitative component** will use student-level administrative data to quantify both the dynamics and determinants of part-time enrollment behavior, and identify factors that relate to success among part-time students.

For the **qualitative component**, we will conduct focus groups with college administrators and students to investigate the factors that motivate students to enroll part time, the barriers they face, and the supports they need to complete college.
Pandemic Recovery Study

Participation:

• **All colleges** will be included in the quantitative component

• **10 colleges** will participate in interviews and focus groups in Fall 2022. **Four of these colleges** will also be chosen to participate in student focus groups in Spring 2023.

Activities:

• Administrators and staff at participating colleges will need to participate in an **online focus group** in Fall 2022 that will collect information on
  • how administrators and staff actively encourage students to enroll full-time;
  • reasons why they think students enroll part-time and have lower rates of success;
  • resources, services, and programs that are available to part-time students, and (d) how they would envision changing current policy and practice to better serve this student population.

• These colleges would also need to commit to **supporting recruitment for student focus groups** in Spring 2023 if they are among the four colleges selected to participate.

We are excited to partner with TSC to implement a coordinated dissemination plan.

Reports will be written for an audience of policymakers and practitioners.

Each report will include a 2-3 page research brief emphasizing key findings and policy implications.

Findings will be disseminated through webinars and in-person learning sessions at TSC Pathways Institutes.

Briefings will be recorded and made available for wider dissemination.
We hope you are interested in participating in one or more components of this research agenda!

To signal your interest, please fill out this form by 8/31/2022: https://www.surveymonkey.com/r/tspresearch

We will also send the form by email to all participants and include a link on the TSC website.

Questions
Based on discussions with college leaders and funders, we have chosen to focus on the three related issues we discussed today (pandemic recovery, student mental health, and part-time enrollment).

- Are these issues important at your college, and why?
- What other issues are you grappling with as your college emerges from the pandemic?
Questions for you

*Based on discussions with college leaders and funders, we have chosen to focus on the three related issues we discussed today (pandemic recovery, student mental health, and part-time enrollment).*

- Are these issues important at your college, and why?
- What other issues are you grappling with as your college emerges from the pandemic?

*We recognize that college leaders and administrators are facing many challenges and have limited time and resources.*

- What are some ways that we can help support your participation in these studies?
- What are some other products, (i.e. webinars, infographic, etc.), that would be useful for you and your teams?
Questions?

Please raise your hand to speak or place questions in the chat box.
Thank you
