S.O.A.R. Success Outcomes Active Relationships: Bridging Educational Silos to Foster Student Success Through a Culture of Care

The modern educational environment emphasizes not just knowledge transmission but the development of holistic, adaptive learners. However, the current institutional prevalence of silos creates a disconnect in implementing culturally relevant and engaging practices and establishing a culture of care.

Advising and Instruction

We are proposing transformational change by implementing a seamless culture of care through professional development. The goal is to improve student outcomes by creating an environment that nurtures students' academic, personal, and professional growth.

Challenges

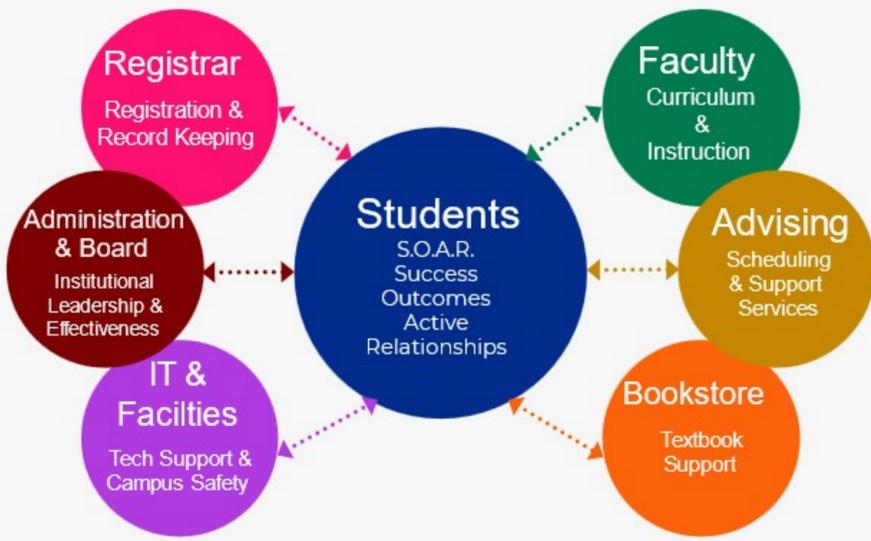

- Awareness of students' needs insecurity
- Build and maintain a repository of student resources
- Faculty buy-in to incorporate new strategies to improve student success
- Apply culturally relevant practices

Reforms

- Create needs assessment for ongoing success
- Designate a team responsible for collecting and maintaining resources
- Implement training for active and engaging teaching techniques
- Professional development to establish a culture of care

Bridging Educational Silos to Foster Student Success Through a Culture of Care

Expected Outcomes

- Improved student academic success
- Enhanced student retention and graduation rates
- Increased equity in educational outcomes
- Strengthened sense of belonging and community
