

### INTRODUCTION

The Texas Success Center collects statewide data to document the progress colleges are making in implementing the four principles of the Dana Center Mathematics Pathways (DCMP) model. The 2018 Texas Success Center Mathematics Pathways Survey is the 4th annual survey conducted by the Texas Success Center to collect this data. Not every college uses the name Mathematics Pathways, but we believe every college is moving towards the common goal of improving student success by offering accelerated, relevant mathematics pathways, aligned with the four Mathematics Pathways Principles:

- 1. All students, regardless of college readiness, enter directly into mathematics pathways.
- 2. Students complete their first college-level mathematics requirement in their first year of college.
- 3. Strategies to support students as learners are integrated into courses and are aligned across the institution.
- 4. Instruction incorporates evidence-based curriculum and pedagogy.

The survey is designed to record progress toward high standards during DCMP implementation. If a participating college wishes to submit additional evidence throughout the survey, that evidence will also be evaluated for recognition as an Exemplar award winner for each principle and overall. The survey will be due **October 26, 2018**. Results from the survey will be analyzed and feedback on implementation will be provided to colleges in late fall. Reviewers will score applications and an announcement of Exemplar award winners will be made at the Texas Pathways Institute on November 14-16 in Dallas.

### **INSTRUCTIONS**

Please review the entire survey prior to beginning, available<u>here</u>. The survey consists of four main sections, one section for each Mathematics Pathways principle of the DCMP model. Also, you will have the option to upload additional documents at the end of each section to support your answers, if you would like your college to be considered for an Exemplar award. Please self-assess activities and accomplishments as of May 31, 2018.

Some documents may need to be gathered from different departments of your college (for example Student Success Course syllabi). We understand you may need to estimate some of the data. We do NOT expect that you will conduct special data collection of analysis.

If you have questions, please contact Mary Battjes, Project Manager, Texas Success Center at 512-476-2572 ext. 109, or mbattjes@tacc.org.

2017 Overall Exemplar Winners - El Paso Community College

### REVIEW OR CHANGE ANSWERS OR UPLOAD DOCUMENTATION

Your email address is your unique identifier to participate in the survey and allows you to review, change answers or upload documentation.

Use these buttons to navigate through the survey:

**NEXT** - at the end of each page (except the last page), saves the responses for that page including uploads and proceeds to the next page in the survey.

**PREVIOUS** - at the end of each page (except the first page), allows you to go back to the previous page to review or edit your responses.

**DONE** - at the end of the last page of the survey, saves all responses and uploaded documentation, and submits the survey.

### **UPLOAD DOCUMENTATION**

File Upload questions support the following file types:

- PDF
- DOC, DOCX
- PNG
- JPG, JPEG
- GIF

Note: Excel files are not supported; please save your Excel files as a PDFs before uploading.

Maximum file size accepted: 16MB

Maximum number of uploads per question: 1

If you change your mind, you can click **Remove File** to clear your response, or **Replace File** to change the file.

If you want to close the survey to finish later, click the**X** in the upper right corner of your screen. Your answers will be saved in any section where you clicked **Next**, or if you clicked **Done** at the end of the survey. You will be able to make changes through October 26, 2018, by clicking the link in your email to pick up where you left off.

The survey will be due October 26, 2018.

## PRINCIPLE 1

All students, regardless of college readiness, enter directly into mathematics pathways.

Goal: All students have access to - and are actively advised into - a mathematics pathway that engages them in rigorous and challenging mathematics content that prepares them for their program of study and/or provides them skills needed to be a successful and productive consumer and citizen. The process for selecting and enrolling into the appropriate mathematics pathway is clear and is normative practice at the college.

1. What percentage of your students have a defined requirement for the math default
gateway course?
0-49%
50-79%
80-100%
2. Are default math requirements aligned with programs of study?
Default math courses have been reviewed and directly serve the needs of all programs of study.
Some areas of misalignment have been identified and the college has a plan to align default math courses with all programs within the next year.
Some areas of misalignment have been identified and the college does not have a plan to align default math courses with all programs in the next year.
Default math requirements have not been reviewed.

7. Which describes your current advising practices and policies for first-year students?
(select all that apply)
Standard practice is to enroll students in a math course aligned to their chosen program of study in their first semester or year.
Advisors complete training to understand that college algebra is no longer the default math placement for all students.
Advisors use degree maps, the Transfer Inventory, and/or other pathways resources when they meet with students.
Students are required to select a program of study or meta-major no later than the completion of 15 semester credit hours.
8. Is the developmental or co-requisite and gateway course's content aligned? (select all that apply)
Yes, for all of the courses in an algebra-intensive pathway.
Yes, for all of the courses in a statistical reasoning pathway.
Yes, for all of the courses in a contemporary math/quantitative reasoning pathway.
No, but the college is in the process of reviewing content alignment.
No, and the college does not yet have a plan to review content for alignment.
Requested Documentation - Required for Exemplar Award Consideration
UPLOAD DOCUMENTATION INFORMATION
File Upload questions support the following file types: PDF, DOC, DOCX, PNG, JPG, JPEG, GIF. Excel files are not
supported; please save your Excel files as a PDFs before uploading. Maximum file size accepted: 16MB. 1 upload per
question. If you change your mind, you can click Remove File to clear your response, or Replace File to change the file.
1. Upload at least 1 algebra-intensive and 1 non-algebra-intensive program map
demonstrating mathematics alignment within those programs. (charts used by advisors to
show course sequencing)
Choose File No file chosen
2. Upload available data demonstrating how implementing Principle 1 has impacted
student success.
Choose File No file chosen

## PRINCIPLE 2

Students complete their first college-level mathematics requirement in their first year of college.

Goal: All students in the target population\* enroll and are successful in an accelerated mathematics pathway. This is defined as a pathway that enables them to earn college-level mathematics in 1 semester.

For Principle 2, please self-assess your college's status of providing accelerated mathematics pathways for students in the target population\*. You may upload recommended supporting documentation at the end of this section.

\*The target population consists of students who test at Level 5 or above on the TSIA assessment. This population includes students who are college-ready.

1. Indicate the percentage of students in the target population enrolled in accelerated mathematics
pathways that is not a co-requisite model.
More than 50%
26-50%
Less than 25%
2. Indicate the percentage of students in the target population enrolled in accelerated
mathematics pathways that uses a corequiste model.
More than 50%
26-50%
Less than 25%

	Analyze enrollment and completion data for these courses
	Compare enrollment and completion data for these courses against the traditional pathway
	Compare enrollment and completion data for one acceleration model against another
	Analyze longitudinal student-level data for students completing an accelerated math course
	Analyze completion data for accelerated courses by student placement score (TSI or other assessment)
	Analyze completion data for accelerated courses by student population groups
Othe	er

## PRINCIPLE

Strategies to support students as learners are integrated into courses and are aligned across the institution.

Goal: All students receive intentional and strategic instruction and supports over time to develop skills and mindsets that help them become effective and successful learners. These skills and mindsets are used and supported in academic courses, especially mathematics courses.

For Principle 3, please self-assess your college's status of supporting student success. You may upload supporting documentation at the end of this section.

1. Which students receive success strategy instruction through a learning frameworks or
student success course or other delivery methods, such as NCBOs?
Student success strategies are a <b>required</b> component of curriculum for a majority of <b>all</b> students.
The majority of <b>developmental</b> students are <b>required</b> to receive success strategy instruction.
Student success strategies are an <b>optional</b> component of curriculum for a majority of <b>all</b> students.
2. What percentage of your student body receives student success instruction?
0-25%
26-50%
51-75%
76-100%

PRINCIPLE 4

Instruction incorporates evidence-based curriculum and pedagogy.

Goal: All students in developmental and gateway mathematics courses receive instruction that encourages active engagement with the mathematics content; promotes conceptual understanding, critical thinking, and problem solving; and provides opportunities for students to communicate - with one another and with the instructor - about their learning.

For Principle 4, please self-assess your college's status of supporting math faculty and student learning opportunities through pedagogical techniques and curriculum. You may upload recommended supporting documentation at the end of this section.

1. To what degree do the curricular materials provided by the math department

orporate conceptual understanding, critical thinking, problem solving and nmunication skills?
Materials <b>consistently emphasize</b> conceptual understanding, critical thinking, problem solving and communication skills.
Materials <b>occasionally emphasize</b> conceptual understanding, critical thinking, problem solving and communication skills
Materials <b>do not emphasize</b> conceptual understanding, critical thinking, problem solving and communication skills.
How does your institution create a culture in which faculty feel safe to debate, critique d ask for support for improving instructional practice?

	ath department collaborated to establish consistency for instructional
practice? Cons	sistent instructional practice may include pedagogical approaches used
across classro	ooms, decisions on use of technology, standard exams, etc. (select all that
apply)	
Yes - consiste	ency in instructional practice is routinely discussed in department meetings.
Yes - faculty c	collaborate to establish consistency in instructional practices.
Yes - the depa	partment chair has established policies for consistent instructional practice.
No - consister	ency is not a focus of instructional practice.
	campus and off-campus professional development activities are your full-
time faculty re	equired to participate?
5. In what on-c	campus and off-campus professional development activities are your <b>part-</b>
time/adjunct f	faculty <b>required</b> to participate?
